

# Digital, global, simple

Digital acceptance test for industrial gear units

→ **NEW**

# Your customized inspection process

**As individual as your industrial gear unit. Anyone investing in an industrial gear unit rightly expects to receive service that is both customized and of a high quality. This is particularly true when it comes to the in-person acceptance test at our Bruchsal plant.**

But what if it's not possible to conduct the acceptance test in person?

With our digital acceptance test via video, direct from our Plant for Large Gear Units, we have created a solution for you. We offer a wide range of tests and you can choose for yourself which ones we should carry out. This could include heat runs, visual inspections, a final assembly inspection, heat treatment verifications, material certificates and much more – we do our utmost to meet your specific requirements.

## Benefits of the digital acceptance test at a glance:

- **Efficient:** You save yourself the time-consuming trip to and from our plant.
- **Scalable:** From simple visual inspection to time-intensive heat runs and multi-stage test procedures – everything is possible.
- **Expandable worldwide:** Utilize the opportunity to involve additional staff or people from other countries or continents in the acceptance process.

**Thanks to the incredibly positive response, the digital acceptance test will remain part of our service portfolio. It goes without saying that you are still welcome to conduct your acceptance test in person at our plant.**
